Listing of Claims:

Claims 1 – 13: canceled

14. (currently amended) A steering mechanism comprising:
a housing;
a rack, which defines an axial direction and meshes with a pinion; and
a hydraulic servo-drive having a piston/cylinder unit comprising a cylinder, a piston, and a piston rod that extends in said axial direction, wherein said rack and said piston rod are parallel to one another in said axial direction and are spaced from one another in a direction transverse to said axial direction, and wherein the rack is fixedly connected to the cylinder in the axial direction, and wherein a modular rotary slide valve is eccentrically secured to a frame that carries said steering mechanism..

15. (canceled)

16. (canceled)

17. (canceled)

18. (previously presented) A steering mechanism according to claim 14, wherein free ends of said rack are encased by sleeves that enclose and outwardly seal a movement space of said rack.

19. (previously presented) A steering mechanism according to claim 14, wherein free ends of said rack are encased by sliding sleeves or bellows that are adapted to free a space that is disposed axially adjacent to said rack.

20. (canceled)

21. (canceled)

22. (previously presented) A steering mechanism according to claim 14, which is provided for a vehicle, and wherein said piston rod is mounted so as to be substantially unmovable relative to the vehicle.

23. (previously presented) A steering mechanism according to claim 14, wherein a center take-off for tie rods that are to be actuated by said steering mechanism is secured directly to said cylinder.

24. (previously presented) A steering mechanism according to claim 14, which includes means for supplying hydraulic fluid to end faces of said piston for actuating said servo-drive.

25. (previously presented) A steering mechanism according to claim 14, which includes a guide rod, and wherein said guide rod, said rack, and said piston rod are parallel to and axially spaced from one another.

26. (canceled)
